GUILFORD

POLL HEREFORDS

Welcome to Guilford. Our 45th annual sale will be held on the 30th of April at 1.30pm, offering 42 bulls. This year we are changing the format to the Helmsman sale system, and we hope this change will allow buyers the opportunity to purchase bulls in their order of preference regardless of the catalogue order.

In the store saleyards, Guilford cattle are well sought after by finishers due to the extra weight gain and doing ability they offer. At the recent Powranna weaner sale our steer calves sold up to \$1330. Herefords Australia informed us that the price our weaner steers achieved at Bothwell weaner sale in 2016 was the National top price for Hereford weaners for the 2016 Autumn weaner selling season, and it was also believed to be an all breeds top price as well. This result is a product of the growth, milk, muscle, and doing ability we have bred into our herd and shows that the genetics at Guilford are equal to any found across Australia.

In our experience we prefer to use bulls with moderate birth-weight EBVs as their progeny generally have better growth potential than those of very low birthweight bulls, which can have a significant impact on your bottom line. We aim to breed females with the ability to calve good average sized calves, without the need to use low birthweight bulls that can actually decrease calving ease in future generations by decreasing cow pelvic area size. Calving ease can also be significantly increased through good management of nutrition and mineral supplementation.

We now join 180 stud females and 280 commercial females each year. Bulls from the stud herd are used in the commercial herd. This allows us to assess the performance of our bulls and makes us aware of the important commercial traits that need to be maintained or strengthened when selecting our stud sires.

The bulls have all been run as one group from weaning until December 21st, and then split into two groups (Lots 1-22, and lots 23-42) with identical feed conditions.

We are very pleased with this years bulls and we believe they are the most even line we have presented, with very good type and performance running right through the catalogue, and we offer them with confidence.

If you are looking for easy care cattle with proven commercial performance, then we look forward to seeing you on the 30th of April or pre sale inspection by appointment is welcome any time before. If we can be of any assistance before or on sale day please do not hesitate to ask.

The Davie Family.

Sale Information

Guilford is located on Torhill Road approximately 13kms from Ouse and 23kms from Bothwell.

Pre-sale inspection of cattle is welcome and can be arranged by appointment with the vendors.

Sale Day inspection from 10:30am. Helmsman sale starts at 1.30pm.

Bull weight sheet available on sale day. Or available on our website by 27/4/2019

Free delivery to Melbourne, King Island, and Flinders Island on bulls sold at auction for \$3500 & over.

Bulls will be delivered free locally and to major connection points. Eg. Bridgewater, Powranna, Quoiba.

Vendor terms for 1st September payment are available to buyers approved by the agents.

Insurance is recommended and can be arranged for transit and/or periods up to 12 months cover.

While every care will be taken, no responsibility can be accepted whilst awaiting delivery.

A rebate of 5% commission will be available to all outside agents who attend the sale with or on behalf of their client, and introduce clients in writing at least 12 hours prior to the commencement of the sale.

A rebate of 1% commission will be available to all outside agents not in attendance but introducing clients in writing at least 12 hours prior to the commencement of the sale.

Transport and accommodation available through the agents.

Sale venue has Telstra 3G coverage and phone bidding can be organised by contacting the selling agents.

Refreshments available at sale.

Online catalogue with photographs of all sale bulls and some sires available at **www.guilford.com.au**

Health.

All bulls have been ear notch tested PI negative for Pestivirus (BVDV).

The bulls have also been vaccinated with 5 in 1 vaccine and annual boosters are recommended. Last done 8/2/2019

Property has transitioned to a Johnes's Beef Assurance Score (J-BAS) of 8, had been in the BJD MAP since 2000.

Property is EU accredited.

Sale Information

Guarantee.

All bulls sold are guaranteed fertile. This condition is valid for a period of 12 months after date of sale and if the vendor receives notification of infertility, not caused by injury, together with a certificate from a registered veterinarian on or before that date. In the event of an animal failing to breed, a credit equal to the full purchase price minus salvage value will be given at the following sale or by negotiation with the vendors. Any bulls for which claims are made must be delivered free of charge by the purchaser to any place mutually agreed upon.

Genetic Testing

All sale bulls have had a LD Genomic test completed. The Genomic information from this test is used to enhance EBV data and accuracy, verify the sire of all bulls, test for any genetic conditions, and also identify bulls that are homozygous poll. Homozygous poll animals are identified with (PP) after their name. (P) indicates a poll animal that carries a recessive horn gene. (S) indicates an animal has scurs.

If mated to horned cows, these bulls that carry two copies of the poll gene (PP) could genetically dehorn up to 100% of their progeny. These bulls would be of assistance to breeders with horned females that wish to accelerate genetic dehorning in their herds. This may help them achieve the requirements of some QA programs which aim to minimise dehorning.

Generally, strong poll herds do not need to focus on the gene due to the dominance of the poll gene (P) to the horn gene (h).

Handling your new bull.

Most of our stockwork is done using horses and dogs. The cattle are also familiar with quad bikes and vehicles. In the yards the cattle are handled quietly and confidently. All sale bulls have been evaluated for temperament and are quiet and easy to handle under these conditions. However we recommend that when your new bull arrives home, have some steers or cows in the yards when you unload him to help him adjust to his new environment, especially if a solo purchase.

Liability.

Although accidents at sales are rare, people attending do so entirely at their own risk.

Whilst all due care and attention has been paid to accuracy in the compilation of this catalogue, neither the vendors nor the selling agents assume any responsibility whatsoever for the correctness, use or interpretation of the information on animals included in this sale catalogue.

Please bring this catalogue to the Sale.

BREEDPLAN EXPLANATION

Breedplan is a performance evaluation programme that describes the genetic profile of bulls for a number of commercially important traits. This profile is given as an Estimated Breeding Value (EBV), expressed as a figure (+/-) relative to the breed benchmark of zero (0) for each trait. The EBVs in this catalogue are Hereford Group Breedplan EBVs and can be directly compared with Hereford Group Breedplan from other herds.

AVERAGE 2019 GROUP BREEDPLAN EBVs FOR 2017 DROP CALVES.										
Bwt	Milk	200	400 wt	600 wt	CWT	EMA	Rump	RBV%	IMF%	SS
+4.4	+16	+33	+54	+77	+50	+3.3	+0.6	+0.8	+0.4	+2.0

GL - Gestation Length EBV (days) is based on AI records. Lower (negative) GL EBVs indicate easier calving & increased growth after birth.

BWT - Birth Weight EBV (kg). The lower the birth weight EBV, the lighter is the birth weight potential of the progeny.

Milk - Genetic milk EBV (kg) reflects extra calf weight at weaning due to the genetic influence a sire has on his daughters milking and mothering ability.

200 WT - 200 Day Weight EBV (kg) indicates the relative weight advantage of a sire at 8-10 months of age.

400 WT - 400 Day Weight EBV (kg) indicates the relative weight advantage of a sire at yearling age.

600 WT - 600 Day Weight EBV (kg) indicates the relative weight advantage of a sire beyond yearling age.

CWT - Carcase Weight EBV (kg) estimates the genetic difference in carcase weight at a standard age of 650 days.

EMA - Eye Muscle Area EBV (sq.cm) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcase. Bulls with positive (+) EBVs for this trait are expected to produce more muscular progeny than bulls with negative EBVs.

Rump - More positive EBVs indicate more subcutaneous fat and earlier maturity. Bulls with negative EBVs for this trait are expected to produce relatively leaner progeny than bulls with positive EBVs

RBV% - Retail Beef Yield Percentage EBV (%) represents total (boned out) meat yield as a percentage of a 300kg dressed carcase. A more positive EBV indicates higher percentage yield.

IMF% - Intra-muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat at the 12/13th rib site in a 300kg carcase. Depending on target markets, positive values are generally more favourable.

SS - Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality & quantity. Positive EBVs indicate higher fertility. SS is also positively associated with female fertility.

Accuracies - The accuracy provides a measure of the reliability of the EBV. The higher the value, the less likelihood of the EBV changing with the addition of more performance information on the animal or its relatives. Accuracy of less than 75% should be considered low.
